Question 1

Correct

Marked out of
3.00

[Flag
question](#)

Write a program to read two integer values and print true if both the numbers end with the same digit, otherwise print false. Example: If 698 and 768 are given, program should print true as they both end with 8. Sample Input 1 25 53 Sample Output 1 false Sample Input 2 27 77 Sample Output 2 true

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int a;
5     int b;
6     scanf("%d%d",&a,&b);
7     if(a%10==b%10)
8         printf("true");
9     else
10        printf("false");
11    return 0;
12 }

Question **2**

Correct

Marked out of
5.00

🚩 [Flag
question](#)

Objective

In this challenge, we're getting started with conditional statements.

Task

Given an integer, *n*, perform the following conditional actions:

- If ***n*** is even and in the inclusive range of **2** to **5**, print ***Not Weird***
- If ***n*** is even and in the inclusive range of **6** to **20**, print ***Weird***
- If ***n*** is even and greater than **20**, print ***Not Weird***

Complete the stub code provided in your editor to print whether or not ***n*** is weird.

Input Format

A single line containing a positive integer, ***n***.

Constraints

- $1 \leq n \leq 100$

Output Format

Print Weird if the number is weird; otherwise, print Not Weird.

Sample Input 0

3

Sample Output 0

Sample Input 1

24

Sample Output 1

Not Weird

Explanation*Sample Case 0: $n = 3$* n is odd and odd numbers are weird, so we print **Weird**.*Sample Case 1: $n = 24$* $n > 20$ and n is even, so it isn't weird. Thus, we print **Not Weird**.**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int a;
5     scanf("%d",&a);
6     if(a%2!=0)
7         printf("Weird");
8     else if(a%2==0&&a>=2&&a<=5)
9         printf("Not Weird");
10    else if(a%2==0&&a>=6&&a<=20)
11        printf("Weird");
12    else if (a%2==0&&a>=20)
```

	Input	Expected	Got	
✓	3	Weird	Weird	✓
✓	24	Not Weird	Not Weird	✓

Passed all tests! ✓

Question **3**

Correct

Marked out of 7.00

[Flag question](#)

Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to the square of the third. For example, 3, 5 and 4 form a Pythagorean triple, since $3*3 + 4*4 = 25 = 5*5$ You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the output message is in small letters. Sample Input 1 3 5 4 Sample Output 1 yes Sample Input 2 5 8 2 Sample Output 2 no

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int a,b,c;
5     scanf("%d%d%d",&a,&b,&c);
6     if(a*a+b*b==c*c)
7     {
8         printf("yes");
```

```
12     printf("yes");
13     }
14     else if(b*b+c*c==a*a)
15     {
16         printf("yes");
17     }
18     else
19     {
20         printf("no");
21     }
22     return 0;
23 }
```

	Input	Expected	Got	
✓	3 5 4	yes	yes	✓
✓	5 8 2	no	no	✓
